DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method for optimization of the production of a genetic end product comprising providing integration cassettes, transforming a donor cell with the cassettes, infecting the donor cell, isolating phage, mixing isolated phage, infecting a recipient cell, selecting transduced recipient cells, screening the recipient cell, activating a recombinase, infecting than overproducing strain screening the infected over producing strain, and comparing the levels of genetic end product, classified in class 435, subclass 69.1.
- II. Claims 13-20, drawn to a method for the optimization of the production of a genetic end product comprising providing a multiplicity of integration cassettes, transforming a donor cell with the cassettes, infecting the donor cell, isolating phage, mixing equal number of isolating phage, infecting a recipient cell, selecting transduced recipient cells, screening the recipient cell, activating a recombinase, infecting an overproducing strain screening the infected over producing strain, and comparing the levels of genetic end product, classified in class 435, subclass 69.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and II are directed to related methods. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the methods comprise different and distinct method steps: providing a multiplicity of integration cassettes, each cassette comprising a nucleic acid integration fragment, and homology arms having homology to different portions of a donor cell chromosome (Group I); providing a multiplicity of integration cassettes, each cassette comprising a promoter and regions of homology to different portions of a P1 donor cell chromosome (Group II).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Further more, especially in instances where the classifications are the same, the non-patent literature searches required for each of these inventions are not co-extensive, hence said searches would be burdensome. Therefore, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nancy T. Vogel whose telephone number is (571) 272-0780. The examiner can normally be reached on 6:30 - 3:00, Monday - Friday.
